

Project Social Software

OpusView is seamless integrated project social software for the enterprise. It presents an intuitive and feature rich interface for users that range from senior executives, program managers and project leads, to team workers. At each level of usage program and project information is personalized. All program and project IP is in one, accessible location with the ability for data interoperability with other software via a comprehensive REST API.

All-in-one solution

Studio

A powerful and easy-to-use builder that allows you to put together everything you need for your collaborative business project. With Studio, business and technical users can create and visualize program and project initiatives from start to finish.

Virtual Assistant

OpusView provides a virtual assistant, which on request will display key event information from all the projects you are involved in. The assistant is voice enabled, so you can hear the relevant details, removing the need to search for them.

Dashboards

Dashboards clarify performance objectives by presenting key information in real-time about all programs and projects you are involved in. The interactive interface allows users to change the detail level and navigate straight to relevant sections.

Interactive Gantt

Use automatically generated personalized interactive Gantt charts to view tasks and plan activities. Understanding task-level costs, risks and dependencies. Monitor the overall timeline of the project and the expected completion date.

Resources

Create notes and mind maps, and capture and store web links, videos, and documents. All these resources can be shared, and any activity update is recorded for transparency.

Project Risks

Identify, analyze and create contingency, mitigation and residual action plans, for project risks that may arise, to make sure your project remains on track and meets its goal.

Real-Time Communications

Increase work efficiencies by purposeful interactions and sharing information in your collaborative project streams using topic-based chat, message broadcasting and call conferencing with VOIP.

Voting and Feedback

Powerful, flexible, and designed to gain an accurate view of people's preferences, real-time voting and feedback systems ensure organizational buy-in and are a great way to increase participation in company-wide projects.

Sketcher

An integrated canvas editor can convey information visually, advance thinking, and support discussion. Import images and files to help with planning and sharing ideas in real-time.

Community

Strong community connections are embedded to enable successful relationships whenever there are business initiatives to complete. Users can find out about co-workers' profiles, skills, and expertise, be notified about new project initiatives in the enterprise, and access and contribute to project-orientated Wikis and Blogs.

Sharing

A robust model for permissions and roles identifies users as creators, owners, sharers, and specialist groups. Project stakeholders can be comprised of both internal and external participants. Now you can form your collaborative social networks with the best skills and knowledge. All project resources and components can be shared with pin-point granularity and relevance.

Search

Project leads can quickly identify potential team members by searching for skills and expertise profiles against requirements. Project information can be made public to users who can search for relevant data to share and consume.

To-do Lists

Keep prioritized to-do lists. Activities can be delegated and assigned to co-workers. Vital check list actions won't get missed, and you and the group will be more productive

Team Boards

View project performance, workload of each team member and status of each task. Easily change work schedules to suit priorities.

Templates

With the Template Builder you can build and make accessible, reusable components for a variety of business projects. OpusView templates provide project owners with instant corporate expertise and content to meet regulatory requirements, to adhere to standardizations and to maximize on project ROI. Furthermore, instantly turn successful proven project work packages into templates components for future reuse and continuous process improvement.

Project Costs

Manage projects costs at individual and team levels. Use standardized people rate cards to calculate costs of task working. Track history of costs and make sure project budgets are adhered to.

Task Management

Assign task leaders, set priorities and view task dependencies across your projects. Drill down on tasks that need closer viewing or support intervention.

Work Center

View peoples availability and their project working commitments to balance workloads and identify available work resource. View task leaders, schedules and statuses across your projects. Scenario plan for people resources for upcoming projects.

Reward Center

Incentivize and reward project stakeholders, to make sure peoples work effort and success is being recognized and rewarded in a positive way, whether it's weekly, monthly or milestone based. Reward Center directly connects the project execution work activities either at group or individual levels to reward achievement.

Notifications

Using the event preference settings, both email and real-time desktop alerts are used to ensure teams keep track of key project activities, scheduled events and unexpected results.

Exporting

Real-time project reporting provides instant project information and summaries to program and project leaders to understand the latest performance and status of key activities.

API

The REST API is ideal to connect and exchange data with your favorite software or integration platform (subject to your applications access to a REST API).
